

Netswitch Network Monitoring Solution

PREVENTION

Netswitch designs network with emphasis on Network Security. Providing firewall is the first line of defense when you business is connected to the open from anywhere in the world

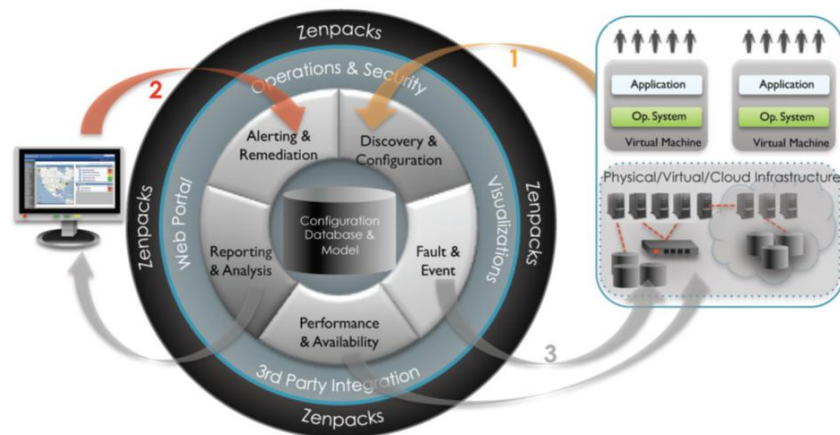

NETWORK PROTECTION

From Internet to each user, Netswitch carefully balance our solution from cost effectiveness to satisfy business requirements. Each solution is designed to guarantee customer satisfaction and providing a safe networking environment to each user.

RECOVERY

A successful team will need to have good Offense and Defense. No one knows when disaster will strike; the data being store in the network will need to be accessible when that happens. Our NetStart Solution includes a good offense strategy to ensure Business Continuity when disaster happens.

NMS - Monitors every aspect of your IT environments: application, networks, servers, operating systems and virtual infrastructure.

The 3 Simple Steps to Monitoring with NMS:

1. Automatic device discovery and interrogation populates the model.
2. Classification automatically applies monitoring behaviors (monitoring templates).
3. Templates ensure appropriate and complete monitoring, alerting and reporting using defined performance

Sample List of Features & Functions:

Agentless Monitoring

- Monitor any SNMP enabled network device
- Ability to monitor Linux via Secure Shell (SSH)
- Easy to deploy. No need to deploy agents on target machines being monitored

Easy Integration

- Web Services API's (XML-RPC & REST)
- XML Import/Export
- Well Documented Plug-in (ZenPack) Framework

Event Management

NMS can normalize data into events, beyond collection from other source and de-dupe the events storing occurrences in a counter which than allows users to set alerts based on the frequency of an alert.

Syslog Monitoring

Monitor system logs from Unix, Linux, Windows and more. In addition NMS can translate that data into events and normalized along with availability and performance data gathered via other methods like SNMP and SSH.

Monitoring Library

Community library includes over 150 monitoring plugins for deep monitoring of infrastructure.

Escalation

Escalation rules can be enforced so that when alerts go without acknowledgement, they can be promoted to another network operator.

Dashboard Configuration

- Drag and drop Dashboard configuration
- Customize views by role, location, business unit

Google Maps Visualizations

- View issues by location on geographic map
- Understand which locations are impacted by outages
- Quickly drill-down into event details to begin troubleshooting

Network Topology Map

- Interactive visual map of network topology
- Identify components in heterogeneous network environment
- Discover network component relationships
- Search and locate network devices

Interoperability with Flexibility

With the extensive support of interoperability, NTM can help customize monitoring for your specialized software
